SUMMARY

Backend engineer with 5+ years building high-throughput data processing systems in Java. Currently operating multi-realm streaming infrastructure at Oracle OCI, powering real-time security finding ingestion and analytics across distributed cloud environments. Previously built Walmart's pricing decision engine with sub-second latency at four-nines uptime. Deep expertise in Kafka, Flink, Kubernetes, and distributed system reliability at scale.

EXPERIENCE

Member of Technical Staff – Oracle, OCI

April 2025 – Present

Bangalore, India

- Built and operate a multi-realm Apache Flink streaming platform on cloud, handling real-time enrichment, ownership resolution, dead-letter routing, and parsing of ~300GB of scanner output daily.
- On-boarded 7+ scanner families end-to-end; designed beta/prod ingestion isolation with Terraform-managed bucket routing and IAM policy separation.
- Enhanced Apache Spark batch workflows for high-volume ingestion/aggregation of security findings; applied schema evolution and partition pruning strategies to lower query latency and improve downstream analytics performance.
- Drove JDK 17, Flink 1.18, Kafka 3.9.1, and Scala 2.12 upgrades; zero-downtime migration across 8+ cloud-native services; reduced monorepo build time by 46% (13.5 to 7.3 min) via Maven parallelization and OpenTelemetry profiling.
- Built Grafana dashboards and alarm coverage tracking ingestion latency, Flink checkpoint health, and Kafka consumer lag; authored rollback/roll-forward runbooks reducing mean time to recovery during production incidents.

Specialist Programmer – Infosys Limited

January 2021 – March 2025

Chandigarh, India

- Operated microservices for Walmart's global pricing engine (PriceX), processing 1M+ pricing decisions daily at 99.99% uptime across concurrent Kafka consumer threads and HikariCP-managed connection pools.
- Reduced pricing rule evaluation latency by over 80% through custom thread-safe data structures and optimized Kafka partitioning, enabling parallel real-time updates across thousands of store-location-timeline combinations.
- Developed a fallout management system (Fusion) for Charter Communications with role-based access control, RESTful APIs, and DocumentDB integration for automated order retry/correction workflows.

AWARDS AND ACHIEVEMENTS

Insta Award — Data Lineage: Gen AI Code Modernization Framework

Infosys, 2024

- Awarded for designing Gen AI-driven code modernization framework using Semantic Kernel, Azure OpenAI, and Neo4j; built graph-based lineage model with PostgreSQL, FastAPI, automating data type mapping and dependency analysis for large-scale migrations

OPEN SOURCE CONTRIBUTIONS

Ahsah — Rust Cryptographic Hashing Library

crates.io/crates/ahsah

- Published a Rust cryptographic hashing library; achieved 9,000+ downloads on crates.io.

SKILLS

Languages

Core Java, Rust, Python, TypeScript, Bash

Backend & Streaming

Spring Boot, Hibernate, Apache Flink, Apache Spark, Kafka, Maven, Gradle

Databases & Search

MySQL, MS SQL, PostgreSQL, MongoDB, Neo4j, DocumentDB, OpenSearch, Redis

Cloud & DevOps

OCI, AWS, Kubernetes, Docker, Terraform, Splunk, Grafana, Prometheus, Git, CI/CD

Generative AI

Azure OpenAI, Semantic Kernel, Prompt Engineering, RAG, Claude Code, Codex

EDUCATION

- B.Tech., Ajay Kumar Garg Engineering College, Ghaziabad, Electronics and Communication Engineering 2020
- Senior Secondary (XII), DAV Public Sr. Secondary School 2016
- Secondary (X), DAV Public Sr. Secondary School 2014
